Union Station Construction Photographs (P41)

Introduction

The Union Station Construction Photographs collection consists of 49 photographs of Kansas City’s Union Station and corresponding infrastructure while under construction. The photos are identified, dated between 1910-1911, and offer insight into the scope of work put into the building that would serve as the primary transportation hub of Kansas City into the middle of the 20th century.

Descriptive Summary

Title: Union Station Construction Photographs
Dates: 1910-1911 and n.d.
Size: 0.2 linear feet, 1 box
Collection Number: P41

Donor Information

Citation Note

Union Station Construction Photographs (P41), Missouri Valley Special Collections, Kansas City Public Library, Kansas City, Missouri.

Administrative Information

Additional form available: These photos have been digitized and are available for viewing via www.kchistory.org.

Related Collections: Additional information on the Union Station, architect Jarvis Hunt, and railroad history may be found in the Missouri Valley Special Collections local history collection as well as the main library catalog. An extensive collection of photographs, blueprints, and records of the Kansas City Terminal Railway Company is accessible at the Kenneth Spencer Research Library at the University of Kansas in Lawrence, Kansas.

Historical Sketch

Excavation officially began on the site for Kansas City’s Union Station on August 27, 1910. The Union Depot in the West Bottoms had long been considered too outdated for the growing city’s needs, and the devastating flood of 1903 exposed the vulnerability of locating the main transportation center in the flood plain of two rivers. A new, modern, and larger train station in a different part of town was needed. Railroad owners, investors, and city officials eventually settled on a new location in 1906. The site was along the southern edge of Kansas City, stretching from
Broadway to Grand, between 21st and 23rd streets. The project was overseen by the newly formed Kansas City Terminal Railway Company (KCTR), a group of six (later 12) railroad companies working together on the design, construction, and operation of the new station.

Issues over financing and infrastructure postponed the start of construction for several years. Once begun, the building designed by Chicago architect Jarvis Hunt took another four years to complete. Buildings already on the site were demolished and city streets were vacated. Solid rock had to be blasted away with dynamite and debris removed with steam shovels. O. K. Creek, which ran through the middle of the site, was diverted and enclosed. Bridges were constructed for new train tracks, and older tracks were widened. Union Station finally opened to the public with a parade and massive civic fanfare on October 30, 1914.

**Scope and Content Note**

This collection contains identified photographs of the Union Station construction site, as well as images of connecting bridges, freight railyards, and the old Union Depot. The photographer(s) is(are) unknown, but they were presumably employed by the KCTR.

The photos measure approximately 4.25 in. x 6 in., and are contemporary prints of the time. The only duplicates are two photographs labeled, “Shiffield [sic] Yard Looking North,” dated November 8, 1910. None of the photographs include any writing on the reverse side. The collection is arranged primarily by site location as identified on the photos, and therein chronologically where possible.

The records of the KCTR were donated to the Kenneth Spencer Research Library at the University of Kansas at the end of the 20th century and are available for research.

**Collection Inventory**

f. 1 Union Station site photographs, 1910-1911 and n.d.
#1 Excavation on Station Site [far view], 9/22/1910; Barcode: 10029481
#2 Excavation on Station Site [near view], 9/22/1910; Barcode: 10029482
